

Ivan Bondarenko

SF Bay Area | Brooklyn, NY | contactivanb@gmail.com | linkedin.com/in/bondarenko-ivan | github.com/hellf1nger

Founder, engineer, and AI systems builder (UC Berkeley M.Eng., Robotics & Controls). Architect agent-native production systems end-to-end — from multi-agent audiobook production at Dramatis AI Studios to logistics infrastructure at Woosh. Comfortable as the technical lead, the implementer, or the customer-facing engineer; usually all three in the same week.

EXPERIENCE

Dramatis AI Studios — Founder & Technical Lead

Mar 2026 – Present

AI creative director that turns book manuscripts into fully-produced audiobooks (multi-voice, scored, sound-designed). Used by indie authors and serial fiction writers.

- Architected a custom multi-agent framework in Python: tool-use loop, worker-pool parallelism, context compression for 200K+ token sessions, automated QA loop with re-synthesis.
- Built a multi-provider TTS orchestration layer pooling Gemini TTS, Google Chirp 3 HD, ElevenLabs, and MiniMax (76+ voices); Director LLM (Gemini 3.1 Pro) casts and directs across providers.
- Designed audio production pipeline: Pedalboard DSP for effects/reverb/EQ, pyloudnorm for broadcast loudness, NumPy/SciPy spectral fingerprinting for voice-consistency QA.
- Shipped 40+ chapters with design partner (author of World Dragon's Heir, 100+ chapter web serial); product roadmap directly shaped by their feedback.
- Operating cost ~\$2–5 per finished chapter against industry baseline of \$5K–\$50K per produced audiobook (10–100× cost reduction).

Woosh — Co-Founder, CEO & Technical Lead

Feb 2024 – Present | San Francisco Bay Area

AI-augmented crowdsourced logistics platform turning commuter vehicles into less-than-pallet-load delivery capacity. Berkeley SkyDeck Pad-13, Batch 19.

- Architected and built WMS/TMS platforms end-to-end across driver app, shipper portal, and backend infrastructure (Flutter, Firebase/Firestore, Next.js).
- Operate an agent-assisted engineering workflow (generator → executors → verifier with human-in-the-loop QA gates); reached ~86–93% test coverage across 120+ resolved issues.
- Implemented company-wide deep-research agents (LlamaIndex AgentWorkflow); wrote prompt kits and SOPs and trained engineering, ops, and business teammates.
- Shipped internal AI tooling: MeetNote (Whisper + PyAnnote transcription, diarization, summarization) and DocSI (RAG over internal knowledge).
- Independent venture/scout work in parallel (2023–2025): sector scans and IC-style memos across logistics, robotics, and applied AI.

Perpetua Industries — Co-Founder & Lead Engineer

Dec 2019 – Dec 2020 | Brooklyn, NY

- Engineered precision CNC machines hitting 0.01" repeatability using Arduino GRBL + ESP32 FluidNC with custom hardware and closed-loop control.
- Delivered 5 pilot machines under tight timelines; ran full lifecycle from CAD to fabrication to bring-up to test.

The Airbrush Company — Creative Director & Operations

Oct 2016 – Aug 2023 | Brooklyn, NY

- Designed the portable Airbox station in Fusion 360; introduced process improvements that cut event setup time by ~70%.
- Scaled operations to 20-person creative crews; landed marquee clients including Adidas, Nike, and Levi's; drove ~300% revenue growth through process design and partnerships.

SELECTED PROJECTS

- **MPC Quadrupedal Locomotion** — MATLAB + Python simulations of MPC with learning-assisted gait policies; prototype validation for stability and agility.
- **7-DOF Sorting Cell** — Built conveyor + Sawyer arm cell with C++ motor control on Arduino and ROS in Python for vision-guided pick-and-sort.
- **FluidNC Drawing Plotter** — Python toolchain with Fusion 360 to FluidNC pipeline for high-accuracy real-time XY motion.

EDUCATION

UC Berkeley — M.Eng., Mechanical Engineering — Control of Robotic and Autonomous Systems • 2024

CCNY (CUNY) — B.E., Mechanical Engineering, magna cum laude • 2022

National Aviation University (Kyiv) — A.S., Software Engineering • 2012

CERTIFICATIONS

Engineer in Training (EIT) — NCEES, 2022

Graduate Certificate in IP and Entrepreneurship Strategy — UC Berkeley

SKILLS

Languages: Python, C++, JavaScript/TypeScript, MATLAB, SQL

AI / Agents: Multi-agent orchestration, LlamaIndex AgentWorkflow, RAG, LLM tool-use, prompt engineering, evals/tracing, custom agent frameworks, multi-provider TTS

Robotics & Controls: ROS, motion planning, computer vision (OpenCV), PID, MPC, sensor fusion, Gazebo, RViz

Audio / Signal: Pedalboard, pyloudnorm, NumPy/SciPy spectral analysis, Whisper, PyAnnote

Embedded / Hardware: Arduino, ESP32, real-time control, CNC, GD&T, 3D printing

Stack: Flutter, Firebase/Firestore, Next.js, Linux, Git, CI/CD, k6 load testing, PyTorch, TensorFlow, scikit-learn
